

Infectious Disease Protocol

COVID-19 Pandemic

Rentals Division

For the first time since the inception of Elite Rentals, the world is facing a disease of pandemic proportions which directly effects the lives and livelihoods of our staff and customers. As a division our job has never been more important, more needed or more dangerous. The following steps are required going forward to stem the tide of infections, and to protect ourselves and our customers/community from the spread of this disease.

Failure to adhere with these steps may result in disciplinary action including dismissal.

Prior to commencing work on a cleanout, a solution of 2% bleach must be used to spray the entire interior as well as the outside of the door and handle. Sprayers and solution will be given to each cleanout hand prior to the commencement of your next shift. (This applies to toilets, wash cars and all customer owned units)

Approved half-masks and filters must always be worn during the cleanout process. (Workers will be assigned masks which they are always expected to keep with them)

Water must be heated above 70 Degrees Celsius for all washing.

A second volley of 2% bleach must be sprayed in the unit and wiped down prior to leaving location.

Practice proper social distancing on site, in town and at the shop (Hazard assessments must be filled out, but please do not go looking for signatures from our customers)

Drivers must disinfect their units before and after each shift. This includes wiping down Steering wheel, door handles, dashboard, gear shift, seat belt assemblies and removing all personal items)

Sincerely

Marc Limoges-Owner
